SMART DORMS AND HOTELS

Soulbox

Built-in intelligence

The Souly app is the intelligence of room control. Thanks to Souly, you set the desired temperature in the room or you turn off the heating if you forgot about it before leaving the room.

Internet WiFi

Solution to the age - old problem of WiFi range in hotels. WiFi in SoulBox is 100% coverage next to you.

Heating Control

Controlling the temperature in the room via mobile app is easy and comfortable for everyone. Souly turns off the heating when windows stays opened.

Built-in analyst

The system analyse customer behavior, observes trends in energy consumption and presents it in the form of graphs.

EcoMode

Souly has the function of setting the room in the "EcoMode", ensuring minimal energy and heating consumption when tenant is out of the room.

SoulBox. Room presence Control. Full functionality in one device.

An integral element of the Souly system is the aesthetic SoulBox device that integrates the functions:

- WiFi Access Point
- Power control
- Event corelation
- Room temperature analysis
- Controlling the elements of the heating system

SoulBox learns the behavior of the resident thanks to which it intelligently controls the consumption of electricity and heat, allowing to generate measurable savings in the facility.
